Examiner's Reasons for Allowance

1. Claims 1-26 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The cited prior art taken alone or in combination fails to teach the claims invention of representing and incorporating available information into mean-reverting-diverting models to develop uncertainty-based forecasts.

The closest prior art (Lucia et al, Electricity prices and power derivatives: Evidence from the Nordic Power Exchange) teaches that X_t follows a stochastic process of the form:

$$dX_t = -\kappa X_t dt + \sigma dZ$$

where $\kappa > 0$, $X(0) = x_0$, and dZ represents an increment of the standard Brownian motion Z_t . Therefore, X_t follows a stationary mean-reverting process, or Ornstein-Uhlenbeck process, with a zero long-run mean and a speed of adjustment κ (Lucia, page 11, Section A. equation (2)). Specifically, Lucia does not teach coefficient κ taking on negative values over defined periods of time as well as fluctuating between positive and negative values (Specification, para 0038). The claimed invention facilitates representation of uncertainty-based forecast using mean-reverting-diverting models that is most consistent with available information.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
